

Network of support offices for researches

The Network of Support Offices for Researchers was created in order to facilitate access to information and to scientific and technological resources in the Community of Madrid.

oficina del espacio europeo de investigación

The European Research Area Office helps people to participate in European projects by means of institutional cooperation and network participation.

Services provided:

- Support to participate in the VII Framework Programme.
- Identification of potential European partners (Pymera Network).
- Organization of training seminars on how to draft European bids and proposals, project management, intellectual property, etc.
- Support is given to foreign researchers working in institutions in the Community of Madrid (Eramore Network).
- Facilitate relations with EU organizations and other institutions through its Brussels delegation.

E-mail oficina.europea@madrimasd.org

oficina del emprendedor de base tecnológica

The Technology-based Entrepreneurs' Office promotes the establishment of technology-based companies, allowing entrepreneurs access to information, specialized services and the most appropriate financial instruments.

Services provided:

- Provides advice to new companies on how to write a business plan.
- Gives support of professionals and mentors in the area of business management.
- Identifies and provides support to find sources of funding.
- Helps assess technological companies.
- Provides assistance in intellectual and industrial property rights protection.
- Provides training in managerial skills.
- Helps disseminate information about new companies.
- Organizes awareness events and seminars.

E-mail oficina.emprendedores@madrimasd.org

oficina de información científica

The Scientific Information Office fosters citizens' participation in the World of science and technology, by improving their access to information and giving them specialized advice and counselling.

Services provided:

- It offers daily scientific information to citizens.
- Deep analyses of state of the art topics in the area of R&D.
- Disseminates information about research done by Madrid institutions.
- Promotes exchanges between the scientific community and the media.
- Organizes scientific events (Science Week, Madrid is Science Fair).

E-mail oficina.informacion@madrimasd.org

oficina de comercialización de la investigación

The Technology Transfer Office helps to disseminate and take advantage of the results of research in the business environment, encouraging participation in the European knowledge market.

Services provided:

- Identification of technology supply and demand in companies and research groups, helping market them.
- Helps manage supply and demand in European networks.
- Supports research groups and companies in their marketing efforts.
- Provides on-line advice on the protection of research results, taxation of R&D, sources of financing, data protection, technological marketing, etc.
- Provides technological surveillance services in fields like Environment and Energy, Materials and Aeronautics, Biotechnology and ICT. It also supports the establishment of cooperation networks of researchers, Associations and businesses.

E-mail oficina.comercializacion@madrimasd.org

oficina de jóvenes investigadores

The Young Researchers' Office helps young researches to have access to the labour market, both public and private.

Services provided:

- It offers a series of courses about the management of science and technology.
- Manages an employment portal specialized in science and technology.
- Connects employers and job seekers.
- Provides advice to researchers on how to design their own professional strategy.
- Compiles and publishes job offers in science and technology.

E-mail oficina.jovenes@madrimasd.org

oficina de coordinación de infraestructuras de investigación

The Coordination of Research Infrastructures Office aims to create awareness, facilitate and improve services provided in the public R&D system of the Community of Madrid and its participating laboratories.

Services provided:

- On-line assistance in the fields of quality management in research, and certification and accreditation of laboratories, research centres and companies.
- Disseminates information on available infrastructure to both researchers and entrepreneurs through on line data bases and publications.
- Provides advice to regional companies when searching for the right laboratories.
- Promotes technical cooperation between laboratories and other types of infrastructure in the Madrid public system
- Provides training for laboratories, research centres and institutions in the Community of Madrid.

A place for science
and technology

The future of Madrid as a cosmopolitan, supportive and competitive region is determined by its research capability and its knowledge culture.

To this end, the Regional Ministry of Education approved the **IV Regional Plan for Scientific Research and Technological Innovation (IV PRICIT)**, whose main goal is to promote the quality of our Regional Research System, making science and technology key elements for regional competitiveness, social welfare and cultural creativity.

The IV PRICIT meets the most pressing demands of the Regional Science and Technology System through:

- Human capital specialization, with the establishment of a public service job as a Researcher
- Improvement of researchers' competitiveness, helping them keep up to date with social and production demands.
- Coordination of R&D infrastructure.
- Greater cooperation with businesses and promotion of business R&D.
- Establishment of a network of cooperation framework with other Autonomous Communities.
- Dissemination of values associated to scientific and technological culture.

The Regional Ministry of Education designed in 1997 the madri+d System, a common space aimed at researchers, entrepreneurs, managers, politicians and citizens. Madri+d fosters communication and cooperation between academia and industry in order to promote knowledge transfer.

Throughout its ten years of history, madri+d has become a place where relations are forged and resources and wills come together to achieve common goals that meet social demands.
